Amendments to the Claims:

This listing of claims replaces all prior versions, and listing, of claims in the application.

Listing of Claims:

Claim 1. (original) A high aspect ratio microcapsule comprising an antimicrobial agent coated with a hydrophilic polymer, said microcapsule having an aspect ratio of greater than about 2.

Claim 2. (original) A high aspect ratio microcapsule according to claim 1 wherein the inorganic antimicrobial agent contains a metal or metal ion selected from the group consisting of silver, copper, zinc, tin, gold, mercury, lead, iron, cobalt, nickel, manganese, arsenic, antimony, bismuth, barium, cadmium, chromium, thallium and combinations thereof.

Claim 3. (original) A high aspect ratio microcapsule according to claim 2 wherein the antimicrobial metal or metal ion is silver, zinc, copper or a combination of any two or all three of the foregoing.

Claim 4. (amended) A high aspect ratio microcapsule according to claim 1 wherein the antimicrobial agent is selected from the group consisting of metal salts, metal oxides, antimicrobial water soluble glasses, antimicrobial metal ion-exchange type agents and combinations thereof.

Claim 5. (amended) A high aspect ratio microcapsule according to claim 4 wherein the antimicrobial agent is an antimicrobial metal ion-exchange type agent comprising a ceramic carrier having ion-exchanged antimicrobial metal ions.

Claim 6. (original) A high aspect ratio microcapsule according to claim 5 wherein the ceramic carrier is selected from the group consisting of zeolites, hydroxyapatites and zirconium phosphates.

Atty. Dkt. A-036 US

Claim 7. (original) A high aspect ratio microcapsule according to claim 6 wherein the antimicrobial agent is a zeolite that contains silver ions.

Claim 8. (original) A high aspect ratio microcapsule according to claim 1 wherein the hydrophilic polymer is a polymer with water absorption at equilibrium of at least about 2% by weight.

Claim 9. (original) A high aspect ratio microcapsule according to claim 8 wherein the hydrophilic polymer is a polymer with water absorption at equilibrium of at least about 5% by weight.

Claim 10. (original) A high aspect ratio microcapsule according to claim 9 wherein the hydrophilic polymer is a polymer with water absorption at equilibrium of at least about 20% by weight.

Claim 11. (original) A high aspect ratio microcapsule according to claim 10 wherein the hydrophilic polymer is chosen from polyhydroxyethyl methacrylate, polyacrylamide, N-vinyl-2-pyrrolidinone, polysaccharides, polylactic acid, polyamide and polyurethane.

Claim 12. (original) A high aspect ratio microcapsule according to claim 11 wherein the hydrophilic polymer is polyurethane.

Claim 13. (original) A high aspect ratio microcapsule according to claim 1 wherein the microcapsule contains from about 1 to about 1000 parts by weight of antimicrobial agent based upon 100 parts by weight of hydrophilic polymer.

Claim 14. (original) A high aspect ratio microcapsule according to claim 13 wherein the microcapsule contains from about 10 to about 200 parts by weight of antimicrobial agent based upon 100 parts by weight of hydrophilic polymer.

USSN 10/032,370

Atty. Dkt. A-036 US

Claim 15. (original) A high aspect ratio microcapsule according to claim 14 wherein the microcapsule contains from about 20 to about 100 parts by weight of antimicrobial agent based upon 100 parts by weight of hydrophilic polymer.

Claim 16. (original) A high aspect ratio microcapsule according to claim 1 further comprising an inorganic discoloration inhibiting agent.

Claim 17. (original) A high aspect ratio microcapsule according to claim 16 wherein said discoloration inhibiting agent is an ammonium compound.

Claim 18. (amended) A high aspect ratio microcapsule according to claim 17 wherein the antimicrobial agent comprises an antimicrobial metal ion-exchange type antimicrobial agent and said inorganic discoloration agent comprises ion-exchanged ammonium ions contained within said antimicrobial agent.

Claim 19. (original) A high aspect microcapsule according to claim 1 further comprising a dopant agent.

Claim 20. (original) A high aspect ratio microcapsule according to claim 19 wherein said dopant is an inorganic sodium salt.

Claim 21. (original) A microcapsule according to claim 20 wherein said dopant is sodium nitrate.

Claim 22. (original) A high aspect ratio microcapsule according to claim 1 wherein the high aspect ratio microcapsule comprises multiple particles of one or more antimicrobial agents encapsulated within a hydrophilic polymer.

Claims 23 – 32 (cancelled)

USSN 10/032,370

Atty. Dkt. A-036 US

Claim 33. (original) A high aspect ratio microcapsule according to claim 1 wherein the aspect ratio is from about 4 to about 100.

Claim 34. (original) A high aspect ratio microcapsule according to claim 33 wherein the aspect ratio is from about 5 to about 30.

Claims 35-44 (cancelled)

Claim 45. (original) A method of controlling the rate of release of an antimicrobial agent from a polymer matrix comprising forming a high aspect ratio microcapsule comprising an antimicrobial agent encapsulated within a hydrophilic polymer of a given hydrophilic property which allows for the release of the antimicrobial agent at a given rate and incorporating the high aspect ratio antimicrobial microcapsule into another polymer which is either non-hydrophilic or which has a different hydrophilic property.

Claim 46. (cancelled)
